## IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant: Masashi TAKAHASHI et al.

Title: IMAGE FORMING APPARATUS AND TONER DISCHARGE

**CONTROL METHOD** 

Appl. No.: Unassigned

Filing Date: 07/10/2003

Examiner: Unassigned

Art Unit: Unassigned

## INFORMATION DISCLOSURE STATEMENT UNDER 37 CFR §1.56

Mail Stop PATENT APPLICATION Commissioner for Patents PO Box 1450 Alexandria, Virginia 22313-1450

Sir:

Submitted herewith on Form PTO/SB/08 is a listing of documents known to Applicants in order to comply with Applicants' duty of disclosure pursuant to 37 CFR §1.56. A copy of each listed document is being submitted to comply with the provisions of 37 CFR §1.97 and §1.98.

The submission of any document herewith, which is not a statutory bar, is not intended as an admission that such document constitutes prior art against the claims of the present application or that such document is considered material to patentability as defined in 37 CFR §1.56(b). Applicants do not waive any rights to take any action which would be appropriate to antedate or otherwise remove as a competent reference any document which is determined to be a *prima facie* art reference against the claims of the present application.

## TIMING OF THE DISCLOSURE

The listed documents are being submitted in compliance with 37 CFR §1.97(b), within three (3) months of the filing date of the application.

## RELEVANCE OF EACH DOCUMENT

The relevance of document A2 is described in the present specification.

Document A3 discloses a tandem copying machine provided with a retention roller for temporarily retaining residual toner that remains on a photosensitive drum after the first transfer. The residual toner is discharged from the retention roller at predetermined timings, and is stored in a cleaner box provided on an intermediate transfer belt.

Documents A1 and A3 claim priority based on the same first-filed application.

Document A4 discloses a density detection means which detects the developer density on either a transfer material transporting member or an image receiving member. The developer that enters a charging unit is made to attach to an image bearer in a multiple rotation mode or in a non-image formation mode corresponding to the intervals between paper sheets. The developer is transferred further to the transfer material transporting member or the image receiving member. The density detection means detects the density of the transferred developer, and a controller controls the bias voltage of the charging unit in accordance with the detected density.

English translations of the foreign-language documents are not readily available. However, the absence of such translations does not relieve the PTO from its duty to consider the submitted foreign language documents (37 CFR §1.98 and MPEP §609). English language abstracts are provided herewith.

Applicants respectfully request that any listed document be considered by the Examiner and be made of record in the present application and that an initialed copy of Form PTO/SB/08 be returned in accordance with MPEP §609.

The Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 CFR §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 19-0741. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Commissioner is authorized to charge the unpaid amount to Deposit Account No. 19-0741.
